The New Normal
Ensuring Continuity of Essential Health Services during Health Emergency Response in Davao City, Philippines

USAID Philippines, Research Triangle Institute, Davao City Health Office

CONTEXT
During the first 4 months of the pandemic, health services decreased in the following health domains managing COVID-19.

• Networked Governance
  - Created cooperation governance structures to ensure timely and effective communication among different levels of government in Davao City, with the Department of Health (DOH) and City Epidemiology Surveillance and Disaster Risk Response Unit.

• Strengthened sustainability and health stewardship
  - Planned the Repatriation of the Local Government Support Fund and the adjustment of a portion of COVID-19 funds to the local level, to monitor COVID-19 efforts, and reallocated funds to expand the local budget for health services.

• Strengthened public-private partnership
  - Developed the Strategic and Work Plan to Establish a network of local health care providers and facilities for essential health services, and steering of the workforce to ensure appropriate numbers of health workers.

• Health Facility Data Gathering, Service Capacity Assessment of Public and Private Health Facilities, and LGU Assessment

• Prevalence Rate of the Health Care Provider Network

• Evidence
  - Service managers for the family planning program of the national health intervention agreed to follow the establishment of facilities that are capable of delivering FP-MNH services at adequate levels.
  - Family planning and maternal, neonatal health (FP-MNH) – decreased by 10%
