Ranking learning priorities for better understanding the impact of health systems thinking on health systems outcomes.

1st: Understanding what pre-implementation steps we can take to lay groundwork for the successful future scale-up or institutionalization of an approach.

2nd: Understand the ways in which systems thinking approaches can make a difference in improving equity, quality, and resource optimization.

3rd: Identifying and understanding approaches for using multisectoral collaboration and political economics to achieve health system and development goals.

4th: Identifying what conditions are most suitable for the application of systems thinking approaches in HSS programs.

5th: Documenting approaches to facilitate the localization of broader HSS activities, such as creating co-creation mechanisms and space for adaptation.

6th: Identifying what MERL approaches/methodologies are effective for understanding the long-term impact and sustainability of time-bound HSS approaches.

7th: Understanding how to drive long-term government and partner commitment to sustaining affordable, accessible, and responsive health services.
